

Drawer Installation

Components Include:

Tool Needed:

Insert Left and Right Drawer Rails.
Insert steel pins above and below wood rails.

Slide Drawer Box into drawer rails as shown.

Slide wheels into channel of Drawer Glides.

Peel off protective tape on adhesive strips.

Overhang can be below drawer box.

Overhang can be above drawer box.

LIGHTLY press the drawer face onto the drawer box. Position the drawer face so that most gaps are the same size between the uprights and any shelf. The tape will allow you to remove the face and reposition multiple times if needed.

IMPORTANT: There is no requirement on how you place the drawer face on the drawer box. It can be moved up or down to fit near a shelf as shown above.

Once you have the Drawer Face positioned the way you like, press it firmly in place. Then screw our "Easy Grip" screws through the drawer box into the Drawer Face for a permanent installation.

Drawer Installation

How to install several drawers in a section:

You can set the first drawer rail on the lowest pin hole setting of the uprights. No bottom shelf is needed but can be placed for aesthetic reasons.

Set the 2nd set of Drawer Rails on the 2nd pin hole above the box just placed.

Remember to add pins above the drawer rail. This prevents the drawer rail from moving. You are ready for the next drawer rails.

Once all your drawers are in place, remove the protective layer on the adhesive strips.

Lightly press the first drawer face in place.

Lightly press the next drawer face in place.

Adjust all 3 faces to have similar gaps.

IMPORTANT: If you want to install more than 3 drawers in a section, you must add a shelf between the 3rd and 4th drawers.

Permanently screw in all drawer faces.
